COMPUTER CONTROLLED ARTICLE CLASSIFICATION AND PROCESSING SYSTEM

Abstract of the Disclosure

A system for processing and classifying articles that classifies a set of articles based at least upon the locations of the articles within a structure. The system provides a notification over a computer network to a user, wherein the notification informs the user that the user has a time period within which to select a first article from the set of classified articles to add to a pre-existing order by the user, wherein the time period is based at least in part on the anticipated time to transfer at least one article in the set of articles to a different location within the structure.
